

NUMBERALL

MARKING IT ALL SINCE 1930

Numberall Knows Pet & Livestock

Other Applications:

- Durable Pet ID Tags
- Livestock Equipment
- Crop ID & Tracking

Custom Numbering Head Improves Accuracy, Saving Time & Money

Challenge:

A major cattle rancher required a way apply permanent, unique tracking IDs onto plastic cattle tags. Existing marking techniques often failed to withstand harsh outdoor weather conditions, leading to illegible IDs and significant challenges in livestock management and traceability. Requirements included:

- Applying clear, unique tracking IDs onto flexible plastic ear tags.
- Producing marks that are permanent and resistant to extreme outdoor environments.
- Providing a reliable and efficient marking process suitable for ranch operations.

Solution:

Numberall developed a customized hot stamping solution based on an adapted Model 50 numbering machine. Integrating a heating element and CNC machined wheels built to the rancher's exact character specifications, this system created durable, weather-resistant tracking IDs fused into the plastic tags.

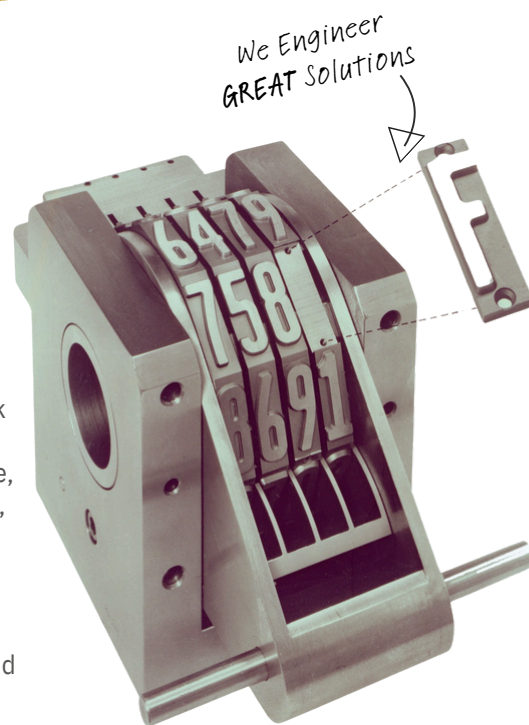

Benefits:

- **Guaranteed Lifetime Traceability:** Permanent hot stamp IDs fused with plastic, resisting harsh weather unlike ink marking.
- **Streamlined Livestock Operations:** Visible, reliable IDs simplified tracking for health, breeding, and inventory, boosting efficiency.
- **Facilitated Traceability & Compliance:** Durable, unique marking provided the foundation for robust internal tracking and regulatory adherence.
