

NUMBERALL

MARKING IT ALL SINCE 1930

Numberall Knows Steel Tanks

Other Applications:

- Fire Suppression Tanks
- Consumer LPG Cylinders
- Industrial Gas Tanks

Ensuring Traceability on Steel Tanks with Numberall

Challenge:

A leading manufacturer of large steel tanks struggled with unreliable traceability marking.

- Harsh Environment: Tanks exposed to corrosive chemicals, extreme weather, and abrasive handling.
- Marking Failure: Traditional labels or surface prints quickly became illegible.
- Compliance Risk: Failed marks compromised industry traceability standards and hindered asset management.
- Need: A permanent marking solution for the tanks' entire lifespan.

Solution:

Numberall provided a custom indent marking solution. They supplied heavy-duty numbering heads and a specialized press system to physically indent critical information (serial numbers, batch codes, manufacturing dates) directly into the steel tank walls. This mechanical indentation creates deep, clear, and permanent marks that resist fading, abrasion, chemicals, and weathering, ensuring legibility for decades.

Benefits:

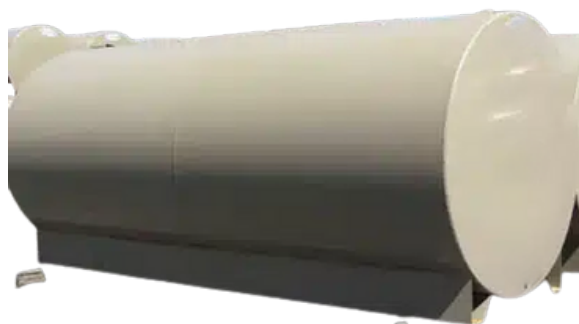

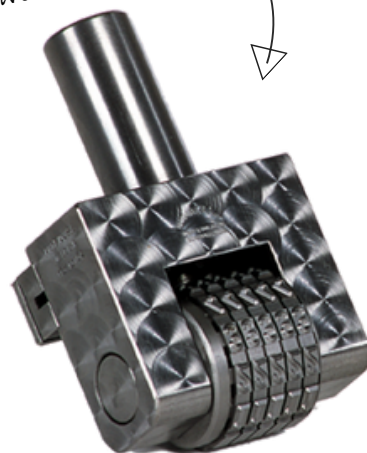

- Permanent Traceability: Indented marks remain clear and readable despite harsh conditions, ensuring lifelong traceability for compliance and asset management.
- Reduced Risk & Costs: Eliminates re-marking needs, streamlines recalls, and improves overall operational efficiency, leading to significant long-term savings.
- Enhanced Reputation: Demonstrates a commitment to quality and safety, strengthening brand trust in the agricultural sector.
